This map displays the **overall priorities** for the Saving Places Index project. This result is intended to show where the priority analysis results for (1) Protecting historic and cultural resources, (2) Preserving key scenic and land conservation areas, and (3) Increasing recreational opportunities stack up, offering multiple benefits if preservation or conservation occurred in that area. This stacked result is produced using a weighted sum analysis that allows for emphasis on analysis results for values that are especially important to the community. Based on responses from polls given to the community, the individual weights applied to each priority analysis result to create the combined overall result are as follows:

Protecting historic and cultural resources (50%)
Preserving key scenic and land conservation areas (42%)
Increasing recreational opportunities (8%)

- - - County boundary
USFWS approved boundary
Park with public access
Private conservation land
Other protected land
